1. Lifetime cost savings calculations are based on 365 days/year and 12 hours of usage per day (with exception with pre-rinse spray valves that are used 1 hour a day), a gas rate of \$0.73/Therm and savings values from the Nevada Southwest Gas workpapers. Percent savings represent the ratio of the total lifetime cost of a standard-efficiency unit to that of a high-efficiency unit of equivalent size and capacity. Calculations last updated on 11/6/2020. Actual savings may vary.
 2. Energy consumption for commercial kitchens based on Energy Star study: www.energystar.gov/sites/default/files/tools/Guide%20for%20Cafes%20Restaurants%20and%20Institutional%20Kitchens.pdf.
 3. Energy consumption savings are based on a comparison of annual gas consumption for high-efficiency and standard-efficiency units of equivalent size and capacity.
