

2026 Rebates and Minimum Efficiencies Residential HVAC - Limited Time Offer

Page 1 of 1

MIDSTREAM HVAC+ PROGRAM

The table below outlines minimum efficiency requirements for heat pumps under 5.4 tons in residential applications with details as follows:

- Income-qualified whole building multi-family retrofit projects should apply to Seattle City Light's [Multifamily Retrofit](#) program and are not eligible to receive midstream rebates for ductless heat pumps.
- Eligibility is listed by AHRI rated values and will be based on sales date and availability of rated values data in AHRI.
- Incentives are listed as \$/outdoor system.
- Customers purchasing qualifying heat pump systems must have a valid electric service account with Seattle City Light.
- Replacement heat type is required on all claims.

Limit 1 heat pump outdoor system per residence. For a limited time, Tier 3 Residential Heat Pumps Rebates are doubled at \$1,200 per unit. This rebates for qualifying claims sold on or after November 1, 2026 and must be submitted by December 31, 2026. Please reach out to the program implementer with any questions about limits and qualifying installations.

Limited Time Offer:

Residential air-source heat pumps (< 5.4 tons)²

Equipment type	Building type	Project type	Tier	SEER2	HSPF2	Customer pass-through rebate ² (\$/outdoor system)
Air source heat pump < 65 kBtuh < 5.4 tons	Residential	Retrofit or new construction	3	16.0	9.5	\$1,200

¹ To qualify as a mini- or multi-split heat pump, products must be listed in the AHRI database as Variable Speed Mini-Split or Multi-Split heat pumps. These products may be referred to as Ductless Heat Pumps in the marketplace

² Pass-through rebates are very strongly recommended to be passed along to the end-use customer and displayed as a line item or otherwise identified on the invoice.
